In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Hyperscale Data Center market for 2018-2023.

A data center is a centralized facility used for data computing, processing, and storage. A data center consists of networking equipment; high-performance servers; storage arrays; and supporting services, such as powering and cooling solutions. A hyperscale data center is more like a customized data center that has wider racks and requires more space compared with a traditional data center. Hyperscale data centers are designed based on the storage requirement. With the evolution of cloud computing and increased use of big data analytics, there is a greater need to construct more data centers that can cater to the growing computing requirements of enterprises.
The market in North America is expected to hold the largest market share. Due to the presence of various developing countries and growing number of data centers, the APAC region is expected to witness numerous opportunities in the market.
Over the next five years, LPI(LP Information) projects that Hyperscale Data Center will register a xx% CAGR in terms of revenue, reach US$ xx million by 2023, from US$ xx million in 2017.

This report presents a comprehensive overview, market shares and growth opportunities of Hyperscale Data Center market by product type, application, key companies and key regions.

To calculate the market size, LP Information considers value generated from the sales
