## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ice Hockey Skate market for 2018-2023. Ice hockey is a contact team sport played on ice, usually in a rink, in which two teams of skaters use their sticks to shoot a vulcanized rubber puck into their opponent's net to score points. Ice hockey skates are skates for the ice hockey.

For industry structure analysis, the Ice Hockey Skate industry is concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 68% of the revenue market. Regionally, Canada is the biggest sales value area in 2016, also the leader in the whole Ice Hockey Skate industry.

North America occupied 71% of the sales market in 2016. It is followed by Europe and Asia-Pacific, which respectively account for around 17% and 8% of the global total industry. Other countries have a smaller amount of sales.

For price trend analysis, a key variable in the performance of Ice Hockey Skate producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.

Over the next five years, LPI(LP Information) projects that Ice Hockey Skate will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in

2017.
