## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Icing Sugar market for 2018-2023.

Icing sugar, also called confectioners' sugar, Icing sugar, and Icing cake, is a finely ground sugar produced by milling granulated sugar into a Icing state. It usually contains a small amount of anti-caking agent to prevent clumping and improve flow. Although most often produced in a factory, Icing sugar can also be made by processing ordinary granulated sugar in a coffee grinder, or by crushing it by hand in a mortar and pestle. Icing sugar is utilized in industrial food production when a quick-dissolving sugar is required. Home cooks use it principally to make Icing or frosting and other cake decorations. It is often dusted onto baked goods to add a subtle sweetness and delicate decoration.

Icing sugar is available in varying degrees of fineness, most commonly XXX, XXXX, and 10X: the greater the number of Xs, the finer the particles.[1] Finer particles absorb more moisture, which results in caking. Corn starch or tricalcium phosphate is added at 3 to 5% concentration to absorb moisture and to improve flow by reducing friction between sugar crystals.[2][3] Because of these anticaking agents, it cannot always be used as a substitute for granulated sugar.

Over the next five years, LPI(LP Information) projects that Icing Sugar will register a 8.3% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
