Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Immersive Simulator market for 2018-2023.

Immersive simulator-based emergency services help in improving safety in industrial performance by preventing catastrophes, reducing maintenance costs, and decreasing the release of waste material in the environment, thereby increasing the production throughout. As emergency situations such as oil spills, fire breakout, or any other disaster can occur in a process plant, field operating training is provided to plant operators to prevent or address such situations. The use of immersive simulators for training helps operators to make better decisions in emergency scenarios, ensures more stability, and lowers the risk of accidents and hazardous impact on the environment.

The immersive simulator market for the oil and gas industry held the largest market share among all industries. Immersive simulator offers the capability to see through solid structures for maintenance and inspection requirements in the oil and gas industry. Moreover, for the safety of the people working in a refinery, proper training in the operations of the assets in the plant has to be provided. This is driving the growth of the market for immersive simulators.

Over the next five years, LPI(LP Information) projects that Immersive Simulator will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
