Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global In-Building Wireless market for 2018-2023. An in-building cellular enhancement system, commonly implemented in conjunction with a distributed antenna system (DAS), is a telecommunications solution which is used to extend and distribute the cellular signal of a given mobile network operator (hereafter abbreviated as an MNO) within a building.

In-Building Wireless operators face an increasing need for more comprehensive coverage, stronger signal, faster traffic, which enable remote deployment and scalability according to the demand.

In-building wireless coverage has become the “fourth utility” in enterprise office space, along with water, power, and wireline voice/data service. Connecting is no longer a luxury, and the necessity is driving demand for constant coverage. Many employees use their cellular devices as their primary means of communication, and they use their personal devices at work. It’s rare to see an enterprise user with a corporate mobile account with one operator. So, an office space must support service from the major wireless carriers.

During the forecast period, the market is estimated to grow significantly and presents a potential opportunity for infrastructure vendors, and operators in the In-Building Wireless industry.

At present, in developed countries, the In-Building Wireless industry is generally at a more advanced level. The world's top vendors are mainly concentrated in US. The top three manufacturers are CommScope, Corning Incorporated and AT&T, respectively with global market share as 19.27%, 9.03% and 8.28% in 2016.

China is expected to be 13.18% In-Building Wireless Market, and Asia-Pacific (APAC) is

expected to emerge as a high-growth market.

Over the next five years, LPI(LP Information) projects that In-Building Wireless will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
