In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Indoor Air Quality (IAQ) Meter market for 2018-2023.

Indoor air quality (IAQ) is a term which refers to the air quality within and around buildings and structures, especially as it relates to the health and comfort of building occupants. IAQ can be affected by gases (including carbon monoxide, radon, volatile organic compounds), particulates, microbial contaminants (mold, bacteria), or any mass or energy stressor that can induce adverse health conditions. Source control, filtration and the use of ventilation to dilute contaminants are the primary methods for improving indoor air quality in most buildings. Residential units can further improve indoor air quality by routine cleaning of carpets and area rugs.

Indoor air quality meter is an upstream product for consumers, it can provide the necessary measurement for the environmental air quality, to ensure human living and working environment healthy as well as comfortable.

According to statistics, in recent years, indoor air quality meter production has maintained steady and rapid growth, due to the policy and hygiene license of restricting in daily products as well as the incremental demand. Indoor air quality meter companies are beginning or will greatly expand their capacity and production to meet the increasing demand of downstream industry. Moreover, the data shows that in 2015 the major companies sales volume has reached 93856 units in the world, and in the stimulus of 'family planning' and consumption concept change.

Upstream of indoor air quality meter is sensor and singlechip, as well as the indoor air quality meter workshop equipment and so on. With the demand development, indoor air

quality meter demand growth is bound to drive the growth of upstream raw materials and other relevant industries, and from this viewpoint, in the future cost and the price of indoor air quality meter will fluctuate with the price of raw materials. Europe and USA are the main consumers of global indoor air quality meter.

Over the next five years, LPI(LP Information) projects that Indoor Air Quality (IAQ) Meter will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
