In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Air Compressor market for 2018-2023.

Air Compressor is a device that converts power (usually from an electric motor, a diesel engine or a gasoline engine) into kinetic energy by compressing and pressurizing air. The energy in the compressed air can be stored while the air remains pressurized. The energy can be used for a variety of applications, usually by utilizing the kinetic energy of the air as it is depressurized.

The Asia-Pacific is estimated to lead the industrial air compressor market, in terms of growth rate as well as market size, from 2018 to 2023. High growth in the power generation, food and beverages and pharmaceuticals sectors and new and proactive policy reforms to support the growth of the manufacturing sector in India and China are key factors driving the market in this region. China is estimated to be the largest market globally, and is set to grow at promising CAGR from 2018 to 2023. India is expected to follow, registering the second-highest growth rate during the same period.

Over the next five years, LPI(LP Information) projects that Industrial Air Compressor will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
