In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Butt Fusion Machine market for 2018-2023.

Butt fusion is a thermofusion process which involves the simultaneous heating of the ends of two pipe/fitting components which are to be joined, until a molten state is attained on each contact surface. The two surfaces are then brought together under controlled pressure for a specific cooling time and a homogenous fusion joint is formed. The resultant joint is fully resistant to end loads and has comparable performance under pressure to the pipe itself.

Over the next five years, LPI(LP Information) projects that Industrial Butt Fusion Machine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
