Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Catalyst market for 2018-2023.

Catalysts accelerate a chemical reaction by providing an alternative route with lower activation energy. This results in a higher reaction rate for the same reactant concentrations and at the given temperature compared with uncatalyzed reactions. Industrial catalysts are used extensively in industrial processes, including petroleum refining, chemical synthesis, petrochemicals and polymers, environment protection reactions, and during the production of petrochemical products.

The heterogeneous catalyst are projected to be the fastest-growing type of industrial catalyst between 2018 and 2023. It is preferred by the major manufacturers owing to its characteristic of being easily separated from the products. Organometallic material is projected to register the fastest-growth among materials, followed by metals, in the market. Metal is the most preferred material used in the manufacturing of the industrial catalyst market. The demand for metals is mainly driven by to the growing application sector. Petroleum refining is the largest application segment in the market. The increase in refinery capacity and the demand for fuels have led to an increase in the use of catalyst in this application.

The Asia-Pacific region, being the largest market for industrial catalyst is also projected to register a high CAGR in the industrial catalyst market, in terms of value, between 2018 and 2023. This growth is mainly driven due to an increase in the industrial catalyst demand in various application sectors, such as petroleum refining, chemical synthesis, and petrochemicals.

Over the next five years, LPI(LP Information) projects that Industrial Catalyst will

register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
