In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Industrial Communication market for 2018-2023.

Industrial communication protocols such as Ethernet are widely used in office networks for data transfers. In the recent times, communication protocols are used in factory floors to meet communication needs of industrial applications. The industrial plant's environment is harsh with extreme temperature conditions, humidity, and vibration. Industrial-based devices are designed to be rugged to withstand such extreme conditions and function effectively.

Among all the communication protocols, the market for wireless communication is expected to grow at the highest rate during the forecast period. The number of wireless connections in industrial applications has increased considerably over the past few years as a result of improved network coverage, quality of transmission, and bandwidth capacity. Advancements in wireless communication technologies especially in WHART, cellular, and WLAN technologies are helping various companies to remotely monitor their assets from anywhere in the world.

APAC held the largest market share and is expected to grow at the highest CAGR. In APAC, the huge demand for consumer electronics and automobiles from countries such as China, India, Japan, South Korea, and among others is driving the industrial communication market.

Over the next five years, LPI(LP Information) projects that Industrial Communication will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
