In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Control Transformer market for 2018-2023.

A control transformer is an isolation transformer that provides good voltage regulation, and is also designed to provide a high degree of secondary voltage stability (regulation) during a brief period of overload condition (also referred to as “inrush current”). Control transformers are also known as Machine Tool Transformers, Industrial Control Transformers or Control Power Transformers.

The three-phase segment dominated the market owing to better efficiency in industrial applications. Three-phase industrial compressors are used to drive a variety of general machinery such as compressors, pumps, crushers, cutting machine tools, and other mechanical equipment in petroleum, chemical, power plants, and other industrial and mining industries.

The metal & mining segment dominated the industrial control transformer market owing to increased expansion in industrialization, construction, and infrastructure activities. Asia Pacific dominated the market. The market in Asia Pacific is expected to hold the largest share of the global market till 2023. Need to reduce equipment failure caused by frequent voltage spikes are driving the market in Asia Pacific.

Over the next five years, LPI(LP Information) projects that Industrial Control Transformer will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
