In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Display market for 2018-2023.

An industrial display is a display used in an industrial control process or device. Its main difference with the civilian or commercial display is the shell design is generally more durable than the common display used in the civilian or commercial fields, the type of materials used to make these panels are divided into ordinary iron, stainless steel, aluminum and many others. There are also special designs, like industrial-grade LCD screen, is specifically engineered to cater to the higher environmental requirements, these industrial-grade LCD screen can tolerate a very wide temperature range, -40 to 85 Celsius degrees, only a few foreign manufacturers produce such displays, the price is, therefore more expensive. The degree of protection of industrial displays is indicated by IP \*\*, the first one being the dust-proof rating and the second being the waterproof rating. Dustproof rating up to 6, waterproof up to 8.

The LCD technology accounted for the largest share of the overall industrial display market in 2017. Products such flat-panel displays, desktop monitors, industrial PCs, and some video walls are using LCD technology. This is responsible for driving the this market.

The HMI application accounted for the largest market size for industrial displays. HMIs are especially significant in the oil & gas industry where understanding rough ambient conditions, extreme temperatures, a high degree of pollution and operation is not only a key primarily to safety but also to improving profitability.

Over the next five years, LPI(LP Information) projects that Industrial Display will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in

2017.
