In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Dryers market for 2018-2023.

Industrial dryers are used to reduce moisture efficiently from large quantities of bulk materials. The principle involved in drying is the drawing of moisture from the interior of individual particles to the surface. This moisture on the surface is then evaporated. Industrial dryers are constructed depending on the type and quantity of material to be processed.

The direct dryers segment accounted for the largest share of the industrial dryers market in 2017 owing to the steep increase in their usage across several industries owing to their simple functionality and efficiency.

The Asia-Pacific region accounted for the largest share of the industrial dryers market in 2017, and is expected to continue its dominance till 2023. China, India, and Japan led the Asia-Pacific industrial dryers market in 2017. The industrial dryers market in China is projected to grow at the highest CAGR among all countries in the Asia-Pacific region between 2018 and 2023.

Over the next five years, LPI(LP Information) projects that Industrial Dryers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
