In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Gas Generator market for 2018-2023.

In this report, the generator discussed mainly stands for gas generator set for industrial applications, which includes three parts: gas engine, generator and control cabinet. It is a new type of green environmentally-friendly power instead of fuel oil and coal units. Gas Engine is an internal combustion engine which runs on a gas fuel, such as coal gas, producer gas, biogas, landfill gas or natural gas. Generators are devices that convert mechanical energy into electric energy.

The need for an uninterrupted power supply during power outage caused by natural calamities or faults in electric networks has boosted the adoption of gas generators in the industrial sector.

The consumption revenue of industrial gas generator grew by about 3.78% in 2015 to reach more than USD 1608 million. The market is currently dominated by a handful of companies, including GE, Rolls-Royce, Himoina and so on.

Over the next five years, LPI(LP Information) projects that Industrial Gas Generator will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
