Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Gas Spring market for 2018-2023.

An Industrial Gas Spring is a type of spring that, unlike a typical metal spring, uses a compressed gas, contained in a cylinder and compressed by a piston, to exert a force.

An Industrial Gas Spring in compression is similar to a coil spring but normally much flatter. Compression Industrial Gas Springs have the rod out and the load from the application forces the rod in. Typically mounted so they are rod down in the position in which they spend the most time. This allows the oil contained within Industrial Gas Spring to lubricate the rod seals. By varying the design of the piston, seals and bearings and by modifying the quantity and viscosity or the lubricating oil can provide Industrial Gas Springs with different operating characteristics.

Europe occupied 38.95% of the production market in 2015. It is followed by United States and China, which respectively have around 19.82% and 28.25% of the global total industry. Other countries have a small amount of production. Geographically, Europe was also the largest consumption market in the world, which took about 32.80% of the global consumption volume in 2015. United States shared 27.96% of global total and China Shared 20.27%.

Industrial Gas Spring is mainly in the field such as automotive, furniture and industrial, which respectively have around 31.99%, 24.60% and 16.18% of the global total industry.

For industry structure analysis, the Industrial Gas Spring machine industry is not concentration. Stabilus is the market leader and occupied about 21.87% of the whole market.

For forecast, the global Industrial Gas Spring machine revenue would keep increasing with annual growth rate with 2~6%. We tend to believe that this industry still has a bright future, considering the current demand of Industrial Gas Spring machine. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that Industrial Gas Spring will register a 4.2% CAGR in terms of revenue, reach US\$ 2320 million by 2023, from US\$ 1810 million in 2017.
