In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Gaskets market for 2018-2023.

A gasket is a mechanical seal which fills the space between two or more mating surfaces, generally to prevent leakage from or into the joined objects while under compression.

Among material types, the semi-metallic segment is expected to lead the industrial gaskets market during the forecast period. Semi-metallic gaskets are consumed by various end-use industries as they offer enhanced tightness of the assembly with low overall load as compared to metallic gaskets. This is one of the major factors driving the growth of the semi-metallic material type segment of the industrial gaskets market.

Among product types, the soft gasket segment is expected to lead the industrial gaskets market during the forecast period. Soft gaskets are the most preferred product type by various end-use industries as they are cost-effective in comparison to other industrial gaskets. Soft gaskets are mostly preferred by the processing industries across the globe.

Over the next five years, LPI(LP Information) projects that Industrial Gaskets will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
