In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Lighting market for 2018-2023.

Lighting is the deliberate use of light to achieve a practical or aesthetic effect. Proper lighting is significant in industrial settings where safety is a primary concern. Adequate illumination is also a key factor in maintaining high worker productivity.

The factory and production lines application held a larger share of the industrial lighting market in 2017. Factory and production lines are upgrading to critical lighting solutions, such as LEDs and connected lighting solution, to receive an immediate payback on their investment through improved light quality and control. The factory and production lines is the largest application area for industrial lighting solutions. The variety of work performed in the industry can vary tremendously from production to machining.

Therefore, every lighting solution needs to be customized according to the available space and the complexity of the task being performed.

Asia Pacific (APAC) dominates the industrial lighting market; however, RoW is expected to grow at the highest rate during the forecast period. The countries in the RoW region are likely to witness an extensive growth in infrastructural building projects. Therefore, the industrial lighting market in this region is expected to exhibit a high growth.

Over the next five years, LPI(LP Information) projects that Industrial Lighting will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
