## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Radiography Equipment market for 2018-2023.

Radiography is an imaging technology that uses gamma rays and X-rays to penetrate an object. The image generated helps to identify deformities or defects, which are not visible to the naked eye. The object under purview is exposed to radiation waves, and a film or a digital detector is used to capture an image of the object. This image assists the end-user (industry) to identify defects, if any, on the object; darker areas on the image indicate high levels of radiation, whereas lighter areas indicate low levels radiation.

The Americas held the largest share of market followed by Europe and APAC in 2017. The market in APAC is expected to grow at the highest rate during the forecast period. The Rest of World which includes the Middle East and Africa holds a small market share at present; however, it is expected to grow during the forecast period due to the increasing demand for industrial radiography services in this region.
