In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Rubber market for 2018-2023.

Rubber refers to elastomeric compounds that consist of various monomer units forming polymers that are heat cured (vulcanized). Polymers are long molecular chains that are connected together (cross-linked) to improve their toughness and resilience. Rubber industry is more than 100 years old. Industrial rubber industry is dominated by one major product tires.

The use of industrial rubber in the automotive, building & construction, and other applications is expected to increase in the Asia Pacific region, followed by South America and the Middle East & Africa regions over the next 5 years. This growth in the use of the industrial rubber can be attributed to the increasing population and the growing disposable income in these regions. Based on type, the synthetic rubber segment is expected to grow at the highest CAGR between 2017 and 2022, in terms of value.

Over the next five years, LPI(LP Information) projects that Industrial Rubber will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
