The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial Vehicles market for 2018-2023.

Industrial vehicles are vehicles that are used for different industrial purposes, such as loading, lifting, and movement of loads. For medium-distance movement of loads, powered vehicles such as lift trucks are used where the load is batched in parts in either a container or a pallet. In case of short-distance transport, manual or semi-powered carts are used. These vehicles are only capable of moving one load at a time from one place to another. However, there are multiple load transporters that can move more than one load at a time, from one or more sources to the preferred destination.

The Asia-Pacific region is estimated to dominate the industrial vehicles market, in terms of value, in 2018, as it comprises some of the fastest developing economies in the world, including China, India, and South Korea. Asia-Pacific market is estimated to be the largest market with a highest market share of the global forklift market by value and volume. The demand in developing countries such as India and China is expected to rise for industrial vehicle in near future. This has led to an increase in industrial vehicle production volumes over the years, with OEMs catering not only to the domestic demand but to overseas demand as well.

Over the next five years, LPI(LP Information) projects that Industrial Vehicles will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
