In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Industrial WLAN market for 2018-2023.

A wireless local area network (WLAN) is a wireless computer network that links two or more devices using wireless communicationwithin a limited area such as a home, school, computer laboratory, or office building. This gives users the ability to move around within a local coverage area and yet still be connected to the network. Through a gateway, a WLAN can also provide a connection to the wider Internet.
Wireless LANs have a great deal of applications. Modern implementations of WLANs range from small in-home networks to large, campus-sized ones to completely mobile networks on airplanes and trains. Users can access the Internet from WLAN hotspots in restaurants, hotels, and now with portable devices that connect to 3G or 4G networks.
Over the next five years, LPI(LP Information) projects that Industrial WLAN will register a xx% CAGR in terms of revenue, reach US$ xx million by 2023, from US$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Industrial WLAN market by product type, application, key manufacturers and key regions.
