In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Inflatable Marine Life Rafts market for 2018-2023.

Inflatable life raft carried aboard a ship or airplane, used to save lives in case the vessel has to be abandoned in an emergency on the sea.

Inflatable lifeboats may be equipped with auto-inflation (carbon dioxide or nitrogen) canisters or mechanical pumps. A quick release and pressure release mechanism is fitted on ships so that the canister or pump automatically inflates the lifeboat, and the lifeboat breaks free of the sinking vessel. Commercial aircraft are also required to carry auto-inflating life rafts in case of an emergency water landing; offshore oil platforms also have life rafts. Ship-launched lifeboats are lowered from davits on a ship's deck, and are hard to sink in normal circumstances. The cover serves as protection from sun, wind and rain, can be used to collect rainwater, and is normally made of a reflective or fluorescent material that is highly visible.

Over the next five years, LPI(LP Information) projects that Inflatable Marine Life Rafts will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
