## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Inflators market for 2018-2023.

An inflator or compressor is a high pressure unit that pushes air out of its hose. Its power typically comes from connecting the compressor to the vehicle's cigarette lighter or battery and its hose is connected to the tyre valve in order for air to enter into the tyre.

Technology, product design, and pricing patterns influence purchases of Inflator. The situation is rather complex, as the companies attempt to cater to diverse segments. The market is currently dominated by a handful of local companies that own the core technologies, including Slime, Campbell Hausfeld and so on.

Lacking features of a monopoly so far and having a relatively basic technology, the Inflator industry still poses some formidable barriers to entry. Thus, capital requirements are quite high due to production features and the diverse nature of the product families. Seasonality of business, price rivalry, government rules and regulations, and limited distribution channels also pose some entry barriers. Yet another deterrent to market entry is the complexity of logistics. Distribution costs may rise further as some mass merchandisers openly require payment by the manufacturers for shelf space, especially for new products. Name identity and brand image require extensive advertising.

Over the next five years, LPI(LP Information) projects that Inflators will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
