In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Infrared Detection Equipment market for 2018-2023.

An infrared detection equipment is a detector that reacts to infrared (IR) radiation. The two main types of detectors are thermal and photonic (photodetectors). The thermal effects of the incident IR radiation can be followed through many temperature dependent phenomena. Bolometers and microbolometers are based on changes in resistance. Thermocouples and thermopiles use the thermoelectric effect. Golay cells follow thermal expansion. In IR spectrometers the pyroelectric detectors are the most widespread.

Over the next five years, LPI(LP Information) projects that Infrared Detection Equipment will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
