Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Inkjet Heads market for 2018-2023.

The emerging ink jet material deposition market also uses inkjet technologies, typically printheads using piezoelectric crystals, to deposit materials directly on substrates. The technology has been extended and the ?ink? can now also comprise solder paste in PCB assembly, or living cells, for creating biosensors and for tissue engineering.
Most consumer inkjet printers, including those from Canon (FINE), Hewlett-Packard, and Lexmark, use the thermal inkjet process. In the thermal inkjet process, the print cartridges consist of a series of tiny chambers, each containing a heater, all of which are constructed by photolithography. As no special materials are required, the print head is generally cheaper to produce than in other inkjet technologies. Most commercial and industrial inkjet printers and some consumer printers (those produced by Epson and Brother Industries) use a piezoelectric material in an ink-filled chamber behind each nozzle instead of a heating element. Piezoelectric inkjet print heads are more expensive to manufacture due to the use of piezoelectric material (usually PZT, lead zirconium titanate).
Over the next five years, LPI(LP Information) projects that Inkjet Heads will register a xx% CAGR in terms of revenue, reach US$ xx million by 2023, from US$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Inkjet Heads market by product type, application, key manufacturers and key regions.
