The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Inlaying Machine market for 2018-2023.

Inlaying Machine, or a mounting press machine, is a device used to encapsulate samples for metallographic preparation.

Metallographic specimens are typically 'mounted' using a hot compression thermosetting resin. In the past, phenolic thermosetting resins have been used, but modern epoxy is becoming more popular because reduced shrinkage during curing results in a better mount with superior edge retention. A typical mounting cycle will compress the specimen and mounting media to 4,000 psi (28 MPa) and heat to a temperature of 350 °F (177 °C). When specimens are very sensitive to temperature, 'cold mounts' may be made with a two-part epoxy resin. Mounting a specimen provides a safe, standardized, and ergonomic way by which to hold a sample during the grinding and polishing operations.

First, for industry structure analysis, the Inlaying Machine industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top ten producers account for about 80% of the revenue market. Regionally, United States is the biggest production area of Inlaying Machine, also the leader in the whole Inlaying Machine industry.

Second, the United States production increases from 4334 Units in 2011 to 4709 Units in 2015 with the average growth rate of more than 2.09%.

Third, United States occupied 31.85% of the production market in 2015. It is followed by China and Europe, which respectively have around 30.72% and 26.91% of the global

total industry. Other countries have a small amount of production. Geographically, Europe is the largest consumption market in the world, which took about 39.35% of the global consumption volume in 2015. United States shares 32.66% of global total.

Over the next five years, LPI(LP Information) projects that Inlaying Machine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
