Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Inspection Robots market for 2018-2023.

An industrial robot is a robot system used for manufacturing. Industrial robots are automated, programmable and capable of movement on two or more axes. Typical applications of robots include welding, painting, assembly, pick and place for printed circuit boards, packaging and labeling, palletizing, product inspection, and testing; all accomplished with high endurance, speed, and precision.

Visual capability in modern robots has evolved from the earlier version of generic robots. The earlier robotic systems demanded customization as each part was expected to operate in an exact area at a particular time due to lack of robotic vision. However, with advances in technology cameras, sensors and software have enabled the robots to detect movement with precision. Therefore inspection robot, now, is able to accomplish inspection tasks that are difficult for human.

Over the next five years, LPI(LP Information) projects that Inspection Robots will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Inspection Robots market by product type, application, key manufacturers and key regions.
