In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Insulated Glass market for 2018-2023.

Insulated glass refers to two or more lites of glass sealed around the edges with an air space between, to form a single unit.

Insulating glass is a very effective way to reduce air-to-heat transfer through the glazing. When used in conjunction with low-E and/or reflective coatings, IG units perform even better for conserving energy and complying with local codes. The most common configuration of IG units for commercial building is a 6 mm lite, 12mm of air space and a 6mm lite.

Over the next five years, LPI(LP Information) projects that Insulated Glass will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
