## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Insulation market for 2018-2023.

Thermal insulation is the reduction of heat transfer (i.e. the transfer of thermal energy between objects of differing temperature) between objects in thermal contact or in range of radiative influence. Thermal insulation can be achieved with specially engineered methods or processes, as well as with suitable object shapes and materials.

The commercial and residential buildings increasingly use refrigerator and air-conditioners and witness a high-energy demand, which contributes significantly to the global energy consumption. One of the major benefits of using insulation materials is to reduce the leakage of energy, which increase the efficiency of a building by cutting down on excess wastage of power.

Over the next five years, LPI(LP Information) projects that Insulation will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Insulation market by product type, application, key manufacturers and key regions.
