The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Intelligent All-Wheel Drive System market for 2018-2023.

Intelligent All Wheel Drive also called automatic all wheel drive is any all wheel drive system that has the ability to automatically vary the amount of torque that is sent to the individual wheels.

Intelligent all wheel drive can improve a vehicle's on road performance and sometimes even assist with off roading. You will need some dedicated off road features for heavy off roading but an intelligent AWD system may still help you when you're away from paved surfaces. An intelligent AWD system may receive data from but not limited to wheel speed sensors, steering angle and yaw rate sensors. This information may then be sent to an ECU which would make the decision as to how to distribute the power from the engine.

Over the next five years, LPI(LP Information) projects that Intelligent All-Wheel Drive System will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
