## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Interferometer market for 2018-2023.

Interferometers are investigative tools used in many fields of science and engineering. They are called interferometers because they work by merging two or more sources of light to create an interference pattern, which can be measured and analyzed; hence "Interfere-ometer". The interference patterns generated by interferometers contain information about the object or phenomenon being studied. They are often used to make very small measurements that are not achievable any other way.

Interferometer industry has much fragmented, manufacturers are mostly in the USA. Among them, USA Production value accounted for less than 30.16% of the total value of global Interferometer in 2016. Keysight Technologies is the world leading manufacturer in global Interferometer market with the market share of 17.78% in 2016. In the past few years, as the main raw material price was reduced, with the increasing in production capacity, expected that the Interferometer raw material price will be stable in the future. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of Interferometer.

Over the next five years, LPI(LP Information) projects that Interferometer will register a 5.1% CAGR in terms of revenue, reach US\$ 810 million by 2023, from US\$ 600 million in 2017.
