Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Intermediate Bulk Container market for 2018-2023.

An intermediate bulk container (IBC), IBC tote, or pallet tank, is a reusable industrial container designed for the transport and storage of bulk liquid and granulated substances, such as chemicals, food ingredients, solvents, pharmaceuticals, etc. The most common IBC is the one-time use plastic composite IBC—a white/translucent plastic container (typically polyethylene) housed within a tubular galvanized iron cage that is attached to a pallet. IBCs can be made from many materials depending upon the needs of the shipper and the legal requirements that must be met. Heavy-gauge plastic IBCs are made of reinforced plastic that requires no steel cage; they have a pallet molded into the bottom so the entire unit is a single piece. Folding IBCs are also made of heavy plastic. Their sides fold inward when the unit is empty allowing the IBC to collapse into a much smaller package for return shipment or storage. Flexible intermediate bulk containers, made of woven polyethylene or polypropylene bags, are designed for storing or transporting dry, flowable products, such as sand, fertilizer, and plastic granules.

Over the next five years, LPI(LP Information) projects that Intermediate Bulk Container will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
