In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Intra-Aortic Balloon Pump (IABP) market for 2018-2023.

The IABP is an electromechanical system used to inflate and deflate an intra-aortic balloon to provide temporary support to the left ventricle via the principle of counter pulsation.

Intra-aortic balloon pump (IABP) is a cardiovascular medical device for temporarily improving cardiac function in human in life-threatening surgeries such as heart transplant, percutaneous coronary interventions and coronary artery bypass grafting. Intra-aortic balloon pump (IABP) is further used in cardiogenic shock and assisting left ventricular function. Intra-aortic balloon pump (IABP) consists two main components as, a double-lumen catheter with a distal end located inflatable bubble and a console that regulates the inflation and deflation of the balloon. Intra-aortic balloon pump (IABP) also improves the oxygen supply by increasing the blood flow to the coronary arteries and stabilize the patients with dysrhythmias and myocardial ischemia. The console manages the desired timing for balloon to inflate and deflate, which is filled by helium or carbon dioxide further helps in proper perfusion. The balloon inflates at the start of diastole and deflates before ventricular systole.

Over the next five years, LPI(LP Information) projects that Intra-Aortic Balloon Pump (IABP) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
