Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Intraoperative Imaging market for 2018-2023.

Intraoperative imaging is aid-device in image guided surgery. During a surgery like a brain surgery, the target location may change, and minor changes will bring disorder, which makes pre-surgical imaging no longer exactly precise. Intraoperative imaging device can supply real-time image monitoring.

This report covers the following product types: Intraoperative MRI, Intraoperative CT and Intraoperative Ultrasound.

Intraoperative CT is ideal for cranial, spine and trauma procedures, designed to function inside existing O.R. Suites. High CT image quality increases surgeon confidence and supports advanced minimally invasive surgery.

The market of Intraoperative CT is mainly concentrated in North America and EU. They occupied more than 80% of the production market from 2011 to 2016.

North America is the most important region in the consumption market with more than 50% market share in 2015. The domestic products in North America are exported to developing countries.

Over the next five years, LPI(LP Information) projects that Intraoperative Imaging will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
