Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ion-exchange Resin market for 2018-2023.

Ion-exchange Resin is an insoluble matrix (or support structure) normally in the form of small beads (0.5-1 mm diameter), usually whitish or yellowish, fabricated from an organic polymer substrate. The beads are typically porous, providing a high surface area. The trapping of ions occurs with concomitant releasing of other ions; thus the process is called ion-exchange. There are multiple types of ion-exchange resin. Most commercial resins are made of polystyrene sulfonate.

The ion exchange resin industry competition was growing and with the global economic downturn trend obviously in recent years, meanwhile the ion exchange resin cost and sales price kept decreasing year by year. Due to upstream raw material fluctuating prices at the same time, the price rise space is not big. It is forecasted that the price of ion exchange resin will be decreased a little while.

with an ion exchange resin production increasing in China and Asia regions. The low-end ion exchange resin products supply has exceeded demand already. But thanks to huge demand, the surplus quantity is not big. The oversupply situation will be intensified in the future if many companies enter into the industry. The price war is inevitable; and it will also eliminate some out-of-date technology projects.

In spite of the problem of severe competition and product surplus, many investors still bullish on this industry considering the wide applications in the downstream industry, especially in food industry and pharmaceutical Industry.

Over the next five years, LPI(LP Information) projects that Ion-exchange Resin will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx

million in 2017.
