Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global IoT Smart Sensors market for 2018-2023. This report studies the IoT Smart Sensors market, a smart sensor is a device that takes input from the physical environment and uses built-in compute resources to perform predefined functions upon detection of specific input and then process data before passing it on. IoT platforms function and deliver valorous kind of intelligence and data using a variety of sensors. They serve to collect data, pushing it and sharing it with a whole network of connected devices. All this collected data makes it possible for devices to autonomously function. By combining a set of sensors and a communication network, devices share information with one another and are improving their effectiveness and functionality.

There are main five kinds of IoT Sensors, which are Pressure Sensor, Environmental Sensor, Optical Sensor, Chemical Sensor and Motion Sensor. Pressure Sensor Type is important in the IoT Sensors, with a consumption market share nearly 32.42% in 2017.

Over the next five years, LPI(LP Information) projects that IoT Smart Sensors will register a 22.9% CAGR in terms of revenue, reach US\$ 32900 million by 2023, from US\$ 9560 million in 2017.
