## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Iron (Ferrous Sulfate) market for 2018-2023. Ferrous sulfate occurs as crystals (heptahydrate) called ferrous sulfate (crystal) and a dried substance (monohydrate to sesquihydrate) called ferrous sulfate (dry). Ferrous sulfate (crystal) occurs as whitish green crystals or crystalline powder. Ferrous sulfate (dry) occurs as a gray-white powder.

Among those applications, iron oxide pigment industry is the largest application and accounted 41.78% in 2016.

The ferrous sulfate industry is relatively fragmented, keeping consistent with the titanium oxide industry. The major production base lies in North America, China and Europe.

Ferrous sulfate has two major forms, Ferrous Sulfate Heptahydrate and Ferrous Sulfate Monohydrate. Ferrous Sulfate Heptahydrate is the direct by product of titanium dioxide and Ferrous Sulfate Monohydrate is processed further from Ferrous Sulfate Heptahydrate. Industrial application of ferrous sulfate is much larger than food and feed industry.

Titanium oxide manufacturers are facing more pressure for handling of waste, commercialization of ferrous sulfate instead of treating as waste help them increase revenue and release environmental protection pressure synchronously. Thus, titanium oxide manufacturers are active to broaden the applications of ferrous sulfate.

Over the next five years, LPI(LP Information) projects that Iron (Ferrous Sulfate) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
