In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Isooctane market for 2018-2023.

Isooctane, also known as 2,2,4-trimethylpentane, is a kind of organic chemical with colorless and transparent liquid. It can be soluble in benzene, toluene, xylene, chloroform, ether and carbon disulfide, carbon tetrachloride, dimethyl formamide and slightly soluble in anhydrous ethanol. It is almost insoluble in water.

It is often used for gasoline blending and organic synthesis.

In the recent years, isooctane capacity develops rapidly. At present, the major manufacturers of ethylene concentrated in America and Europe. America is the largest producer and consumer. China has weak manufacturing ability and consuming ability. Various countries and regions began to focus on environmental issues, therefore, environmental problems of isooctane manufacturer gradually increase the pressure, and this was also reflected in the gross margin.

Owing to the increasing of gasoline standard, the world isooctane capacity will continue to expand.

Over the next five years, LPI(LP Information) projects that Isooctane will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
