## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Isopentane market for 2018-2023.

Pentane is colourless with a very low odour and high volatility thanks to its low, narrow boiling range – it is among the lowest boiling hydrocarbon liquids and so evaporates at a very high rate. It is used principally as a blowing agent in foam production, as a propellant in aerosols and as reaction media for polymerisation processes.

Pentane is a low-cost blowing agent. Over the past few decades, the technology and development of mixed pentane have not developed by leaps and bounds. In the Asia-Pacific region, EPS is growing faster. The EPS industry in the US and Europe is already quite stable.

Over the next five years, LPI(LP Information) projects that Isopentane will register a xx% CAGR in terms of revenue, reach US\$ 120 million by 2023, from US\$ 120 million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Isopentane market by product type, application, key manufacturers and key regions.
