## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Isothermal Nucleic Acid Amplification market for 2018-2023.

Isothermal nucleic acid amplification is referred to isothermal nucleic acid amplification technology. And in this report, we get the statistics on reagents used in isothermal nucleic acid amplification technology. Nucleic acid isothermal amplification is a newer technique that amplifies DNA or RNA specific fragment from few copies to billion-fold copies under a one temperature condition, unlike PCR amplification that needs at least 30-35 thermal cycles to accomplish the reaction.

Currently, some companies in the world can produce isothermal nucleic acid amplification product, mainly concentrating in North America and Europe. The main market players are PreAnalytiX, Meridian Bioscience, Eiken Chemical, Lucigen, OptiGene, etc. The production revenue of isothermal nucleic acid amplification increased from 152 million USD in 2011 to 266 million USD in 2015, with an average growth rate of 13.54%.

In consumption market, the growth rate of global consumption remains high-speed growth. North America and Europe are still the mainly consumption regions and export regions due to the advanced production technology and rapid development of economy. Over the next five years, LPI(LP Information) projects that Isothermal Nucleic Acid Amplification will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
