In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global K-12 Blended E-Learning market for 2018-2023.

Blended e-learning is an education program that combines online digital media with traditional classroom methods. It requires the physical presence of both teacher and student, with some elements of student control over time, place, path, or pace.

Blended instruction is reportedly more effective than purely face-to-face or purely online classes. Blended e-learning methods can also result in high levels of student achievement more effective than face-to-face learning. By using a combination of digital instruction and one-on-one face time, students can work on their own with new concepts which frees teachers up to circulate and support individual students who may need individualized attention.

Over the next five years, LPI(LP Information) projects that K-12 Blended E-Learning will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
