In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Kegerators market for 2018-2023.

A kegerator is a refrigerator that has been designed or altered to store and dispense kegs. By keeping the keg in a refrigerated environment and using CO₂ to pressurize and dispense the keg, it will allow the contents to remain fresh and carbonated for an extended period of time, generally a couple of months.

Specifically designed kegerators are available for both commercial and residential use, however a common refrigerator can be reconfigured into a kegerator with a kegerator conversion kit. Not all standard refrigerators have enough room for a keg, so kegerators are designed in a manner that will allow one or more kegs to fit inside along with the dispense system. Kegerators are typically used to dispense draft beer, but are also gaining popularity for dispensing wine, cold brew coffee and kombucha with certain modifications.

Over the next five years, LPI(LP Information) projects that Kegerators will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
