In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global KVM Switch market for 2018-2023.

A KVM switch (with KVM being an abbreviation for 'keyboard, video and mouse') is a hardware device that allows a user to control multiple computers from one or more sets of keyboards, video monitors, and mice. Although multiple computers are connected to the KVM, typically a smaller number of computers can be controlled at any given time. Modern devices have also added the ability to share other peripherals like USB devices and audio.

With the popularity of USB—USB keyboards, mice, and I/O devices are still the most common devices connected to a KVM switch. The classes of KVMswitches that are reviewed, are based on different types of core technologies in terms of how the KVM switch handles USB I/O devices—including keyboards, mice, touchscreen displays, etc.

Over the next five years, LPI(LP Information) projects that KVM Switch will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
