In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global L-Histidine market for 2018-2023.

L-Histidine is one of the 23 amino acids used to build proteins in humans, known chemically as proteinogenic amino acids. It uses the codons cytosine-adenine-uracil (CAU) and cytosine-adenine-cytosine (CAC). The German physician Albrecht Kossel first isolated histidine in 1896. It was first believed to be an essential amino acid only in infants, although subsequent research has now established histidine as an essential amino acid for all humans.

One of the most common uses of L-histidine as a health supplement is for the support of joint function. It is also used to support seasonal conditions and the nervous system. Blood production may also be a benefit of L-histidine supplements.

Over the next five years, LPI(LP Information) projects that L-Histidine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
