## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Laboratory Plate Handling Systems market for 2018-2023.

Laboratory plate handling systems are systems that move plates from stacking stations to other laboratory instruments. These systems are an essential component of an automated laboratory as they connect individual laboratory workstations and result in a more efficient screening process for laboratory applications. These systems are commonly used along with microplate readers, washers, and incubators.

Microplates Handling Systems could significantly increase sample throughput and thus decreased the time to produce experimental results. Manually manipulating microplate based experiments are labor intensive and prone to human introduced errors.

Numerous microplate automation instruments are available for laboratories seeking increased throughput and greater scale in various protocols such as high throughput screening, next generation sequencing, cellular analysis, PCR set-up, serial dilution, toxicology, plate labeling, etc.

Over the next five years, LPI(LP Information) projects that Laboratory Plate Handling Systems will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
