Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Lactase market for 2018-2023.

Lactase (?-Galactosidase) is an enzyme capable of hydrolyzing lactose into glucose and galactose. Lactase is commonly used to catalyze the hydrolysis of lactose in the food industry for making lactose reduced/free products e.g. milk, yogurt, cream and ice cream.

With 70% of the world's population unable to tolerate lactose, it's hardly surprising that the trend towards healthier food has brought a growing demand for lactose-free dairy products.

The technical barriers of lactase are relatively not high, resulting in numerous manufacturing enterprises. In the market, there are some relatively large enterprises, such as DSM, Novozymes, DuPont, Chr. Hansen Holding, Amano Enzyme, Enzyme Development, SternEnzym, and Specialty Enzymes & Biotechnologies. These companies mainly concentrate in Europe. Europe is the largest producer, more than 60% of total production in 2016. However, China enterprises have rather small production because of technology and equipment, especially in neutral lactase market. Every year, China import amount of neutral lactase to meet the needs of local dairy products companies.

In the past few years, the price of lactase has decreased and we expect the price will slightly lower. However, the improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of lactase.

As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. With the snatch for market share in emerging regions, the competition in lactase industry will become more intense.

Over the next five years, LPI(LP Information) projects that Lactase will register a 4.6% CAGR in terms of revenue, reach US\$ 1080 million by 2023, from US\$ 830 million in 2017.
