Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Lactose-free Food market for 2018-2023. Lactose is the natural sugar present in milk or milk products. Lactase is an enzyme that helps in the digestion of lactose. Therefore, deficiency of lactase leads to the accumulation of lactose in the body, which causes gas, cramps, bloating, nausea, and diarrhea. The foods that do not contain lactose are termed as lactose-free food products.

Many consumers are now opting for lactose-free products due to the perceived health benefits of these products. Most consumers feel that drinking cow's milk can upset their digestive system and cause bloating. The growing demand for lactose-free products, in turn, is encouraging many manufacturers to make modifications to their processing techniques and dosages, and focus on lactose-free product formulations.

Over the next five years, LPI(LP Information) projects that Lactose-free Food will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
