## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Lactulose market for 2018-2023.

Lactulose a 'bifidus factor' is composed of galactose and fructose, which can be produced by the isomerization of lactose. It is a prebiotic carbohydrate which stimulates the growth of health-promoting bacteria in the gastrointestinal tract, it can also be used for the treatment of constipation, hepatic encephalopathy, tumour prevention, and to maintain blood glucose and insulin level.

Lactulose has two types, which include crystalline lactulose and liquid lactulose. And each type has application industries relatively. With pharmaceuticals effect of lactulose, the downstream application industries will need more lactulose products. So, lactulose has a huge market potential in the future. Manufacturers engaged in the industry are trying to produce high purity and good performance lactulose through improving technology.

The major raw materials for lactulose are lactose, sodium hydroxide, and other auxiliary chemicals. Fluctuations in the price of the upstream product will impact on the production cost of lactulose. The production cost of lactulose is also an important factor which could impact the price of lactulose. The lactulose manufacturers are trying to reduce production cost by developing production method.

Over the next five years, LPI(LP Information) projects that Lactulose will register a 1.4% CAGR in terms of revenue, reach US\$ 160 million by 2023, from US\$ 150 million in 2017.
