Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Land Seismic Equipment and Acquisition market for 2018-2023.

Land seismic equipment is used to carry out seismic data acquisition in onshore regions. A vibrator source is used to create shock waves that traverse through various rocks below the surface. These shock waves that reflect off the subsurface rock formations and back to the surface are recorded using geophones. Cables or transmitters are used to transfer information from geophones to a recorder truck. Seismic waves indicate the geological nature of the area surveyed and indicate the possibility of oil or gas reserve.

Modern land seismic acquisition has advanced from a shallow structural determination technique to a sophisticated subsurface measuring tool. Future developments, such as cables with increased numbers of channels, telemetry, and more advanced electronics have spawned areas of specialization beyond any one person's grasp.

Over the next five years, LPI(LP Information) projects that Land Seismic Equipment and Acquisition will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
