Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Laser Marking Equipment market for 2018-2023.

Laser marking is a methods to leave marks on an object, which also includes color change due to chemical/molecular alteration, charring, foaming, melting, ablation, and more. The technique does not involve the use of inks, nor does it involve tool bits which contact the engraving surface and wear out, giving it an advantage over alternative engraving or marking technologies where inks or bit heads have to be replaced regularly.

Laser marking is typically used for processes such as applying labels with bar codes, date codes, QR codes, serial numbers, part numbers or adding copyright / trademarks and logos to a number of different surfaces in many industries. Another popular use is the addition of a date value being added to materials such as metals and plastics; this could be used as a best before date or maintenance due date, etc. Additionally laser marking is useful in the creation of ID and smartcards offering high degrees of fraud prevention. Laser marking offers advantages over other marking methods of mark durability, lower use of consumables, repeatability and reductions in process times. Laser marking is extremely popular in the manufacturing industry and is widely integrated into sub-processes across the production line.

Over the next five years, LPI(LP Information) projects that Laser Marking Equipment will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
